

NAME

from — print names of those who have sent mail

SYNOPSIS

from [-c] [-f *file*] [-s *sender*] [*user*]

DESCRIPTION

The **from** utility prints out the mail header lines from the invoker's mailbox.

The following options are available:

-c Just print a count of messages and exit.

-f *file*

The supplied *file* is examined instead of the invoker's mailbox. If the -f option is used, the *user* argument should not be used. Read from standard input if file name "-" is given.

-s *sender*

Only mail from addresses containing the supplied string are printed.

If *user* is given, the *user*'s mailbox is examined instead of the invoker's own mailbox. (Privileges are required.)

ENVIRONMENT

MAIL If set, the location of the invoker's mailbox. Otherwise, the default in */var/mail* is used.

FILES

*/var/mail/**

SEE ALSO

biff(1), mail(1)

HISTORY

The **from** command appeared in 3.0BSD.
