Name

mmroff − cross-referencing front end for GNU *roff mm* macro package

Synopsis

mmroff [**−x**] *groff-argument* . . .

mmroff −−help

mmroff −−version

Description

mmroff is a simple wrapper for *groff*, used to expand cross references in *mm*; see *groff_mm*(7). It runs *groff* with the **−mm** option twice, first with **−z** and **−rRef=1** to populate cross-reference and index files with their corresponding entries, and then again to produce the document. It also handles the inclusion of PostScript images with the **PIC** macro. Documents that do not use these features of *groff mm* (the **INITI**, **IND**, **INDP**, **INITR**, **SETR**, **GETHN**, **GETPN**, **GETR**, **GETST**, and **PIC** macros) do not require *mmroff*.

Options

−−help displays a usage message, while **−−version** shows version information; both exit afterward.

−x   Create or update the cross-reference file and exit.

Authors

mmroff was written by Jörgen Hägg of Lund, Sweden.
