

NAME

xkbbell - XKB extension user utility

SYNOPSIS

xkbbell [-display <dpi>] [-synch] [-dev <id>] [-force] [-no beep] [-bf <id>] [-kf <id>] [-v <volume>] [-w <id>] [-help|-version]

DESCRIPTION

user utility

OPTIONS

- display <dpi>**
specifies which display to use
- synch** turns on synchronization
- dev <id>**
specifies which device to use
- force** force audible bell
- no beep**
suppress server bell, event only
- bf <id>**
specifies which bell feedback to use
- kf <id>**
specifies which keyboard feedback to use
- v <volume>**
specifies which volume to use
- w <id>**
specifies which window to use
- help** print list of options and exit
- version**
print program version and exit

If neither device nor feedback are specified, xkbbell uses the default values for the core keyboard device.
