

**NAME**

`asin`, `asinf`, `asinl` – arc sine function

**SYNOPSIS**

```
#include <math.h>
double asin(double x);
float asinf(float x);
long double asinl(long double x);
```

Link with `-lm`.

Feature Test Macro Requirements for glibc (see [feature\\_test\\_macros\(7\)](#)):

```
asinf(), asinl():
_ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L /* Since glibc 2.19: */ _DEFAULT_SOURCE /* Glibc versions <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE
```

**DESCRIPTION**

These functions calculate the principal value of the arc sine of  $x$ ; that is the value whose sine is  $x$ .

**RETURN VALUE**

On success, these functions return the principal value of the arc sine of  $x$  in radians; the return value is in the range  $[-\pi/2, \pi/2]$ .

If  $x$  is a NaN, a NaN is returned.

If  $x$  is  $+0$  ( $-0$ ),  $+0$  ( $-0$ ) is returned.

If  $x$  is outside the range  $[-1, 1]$ , a domain error occurs, and a NaN is returned.

**ERRORS**

See [math\\_error\(7\)](#) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error:  $x$  is outside the range  $[-1, 1]$

`errno` is set to **EDOM**. An invalid floating-point exception (**FE\_INVALID**) is raised.

**ATTRIBUTES**

For an explanation of the terms used in this section, see [attributes\(7\)](#).

Interface	Attribute	Value
<code>asin()</code> , <code>asinf()</code> , <code>asinl()</code>	Thread safety	MT-Safe

**CONFORMING TO**

C99, POSIX.1-2001, POSIX.1-2008.

The variant returning `double` also conforms to SVr4, 4.3BSD, C89.
