

**NAME**

fping6 – backwards compatibility with fping below version 4.0

**SYNOPSIS**

**fping6** [ *options* ] [ *systems...* ]

**DESCRIPTION**

**fping6** is a backwards-compatibility symbolic link to **fping** solely for the purpose to be able to specify Smokeping remote configurations which work on systems with fping ≥ 4.0 as well as on systems with fping < 4.0.

Please do *not* use fping in in scripts or configurations which don't require it for backwards-compatibility with older fping versions. It will vanish as soon as it's no more required in setups as mentioned above.
